

4.0 CHANNEL ALLOTMENT METHODOLOGY AND PLAN

4.1 Methodology Overview

The channel allotment methodology used by the Florida Region began with a statewide survey of eligible users to determine specific needs, followed by the establishment of channel pools for those areas not having immediate demands for channels. The results of these findings were then analyzed by computer to determine an initial channel allotment plan to maximize frequency re-use as well as to best satisfy the needs for additional spectrum.

4.2 Statewide 800 MHz Survey

Following the establishment of the Florida Region Committee, a statewide survey was developed and transmitted to potential applicants through the Subregion Committees. A copy of the survey document is included in Appendix D. As was expected, the majority of survey respondents were from those parts of the Region having a known shortage of channels, particularly the South Florida area. The survey results from these most congested areas showed that the new allotment would still fall short of meeting the demand. To enable a viable allotment plan, the Region Committee, together with potential applicants, reduced the channel quantities requested in those areas to values which possibly could be allotted by computer.

4.3 Establishment of Channel Pools

For those areas of the Region not having an immediate demand for the new channels, the Region Committee first applied the ratio of one channel per 25,000 population. This method was found to provide reasonable estimates in the more populated counties, however it tended to underestimate realistic quantities in the rural areas of the State, particularly those with numerous small municipalities. The Committee determined that the 1:25,000 ratio should be applied except where obvious underestimates occurred.

In the case of rural areas, a second algorithm was developed which estimates channel requirements for each separate jurisdiction based on known quantities of sworn law enforcement personnel. The quantities were then multiplied by factors which estimate the total number of eligible users in all categories, as well as anticipated growth through the year 2000. A rate of 4% annually was used based on a ten year statewide average in law enforcement growth. The algorithm is based on the premise that the overall quantity of Public Safety Pool eligibles parallels that of law enforcement agencies.

4.4 Computerized Channel Allotment Program

In performing the initial allotment process, the Region Committee used a computer program made available by Motorola through Communications Engineering Technology, Inc. (CET), to provide a basic distribution of channels. For both the required coverage and interference calculations, the program utilized the data of Okumura²⁰ and was further modified by Motorola to adjust for 922 MHz to 838 MHz. The Okumura "suburban" environment as well as an adjustment for 6 foot mobile antenna heights.

The first program run was attempted in April 1989, and quickly showed that channel needs for the South Florida area were still too severe. The Region Committee again reduced the channel requests for that area by further defining specific locations and coverage areas for municipal systems, and by sub-dividing the jurisdictions and channel needs of county-wide systems based on population densities. Five subsequent computer runs between July and October 1989 were required to arrive at an acceptable solution.

²⁰ Yoshihisa Okumura, et al, "Field Strength and its Variability in VHF and UHF Land-Mobile Service", Review of the Electrical Communication Laboratory, Vol. 16, Nos. 9-10, September-October, 1968.

Based on the original requirements of actual channel loading needs in 1989, the final allotment fell short by twenty-one channels (18 for the Metro-Dade East area, 1 for Broward County, and 2 for the Ft. Lauderdale area consolidated system). Based on a present requirement of 152 channels and utilizing a 4% annual growth projection to the year 2000, the total projected channel shortage for the combined Palm Beach, Broward, and Dade County area is 91 channels.

The current allotment program (used beginning with Amendment #7) was developed by the Florida Bureau of Wireless Communications specifically for the Florida Region. The current program allows prioritized re-allotments around existing licensees in order to maintain spectrum efficiency while satisfying new spectrum needs. Both the original and current programs utilize the same coverage and interference models.

4.4.1 System Coverage Area and Signal Strength Criteria

The coverage area of each system was limited to no more than three (3) miles outside the boundary of the applicant's legal jurisdiction. The mean signal strength at this contour was limited to +40 dBu (+40 dB above one microvolt per meter).

4.4.2 Co-Channel Interference Criteria

Co-channel assignments were made on the basis that an undesired co-channel mean signal level shall be no more than +14.4 dBu anywhere within the coverage contour of the desired station.

4.4.3 Adjacent Offset-Channel Interference Criteria

Adjacent offset-channel assignments were made on the basis that an adjacent mean signal level shall be no more than +33.3 dBu anywhere within the coverage area of the desired station.

4.4.4 Channel Separation Criteria

For practical engineering reasons of transmitter combining, frequency assignments for the same site, for the same applicant, have been spaced at least 0.25 MHz apart, to the degree possible.

4.5 Florida Region Channel Allotment Process

For those Subregions having a known shortage of channels, the Plan incorporates a process that will allow the objective evaluation of all applications for the available spectrum. The flow chart entitled "Florida Region Channel Allotment Process" (see **Figure 2**, page 4-6), shows the sequence of events that will be followed in the allotment of channels.

This process includes a "continuous open window" for accepting applications. In order to determine the simultaneous receipt of two or more applications, a date/time stamp method will be used. This method will utilize the U.S. Post Office postmark, FEDEX/Overnight/United Parcel Service/others, FAX, or other means that include a pre-established date/time stamp method. The method for any "hand-delivered" applications will be a manual date/time stamp. Any "complete" applications (per section 6.0) date/time stamped within 7 calendar days of each other will be considered simultaneously received.

Block #1: The Public Safety allocation is placed in the frequency pool. The allocation initially consists of all available 821-824/866-869 MHz channels. Subsequent iterations consist of channels remaining in a particular area following prior assignments.

Blocks 2-6: Intentionally Omitted.

Block #7: For areas where a definite shortage of frequencies is confirmed (i.e., contention), a Local Subcommittee will be established by the Region Committee to review simultaneously received applications from that area.

Block #8: Applications approved by Local Subcommittees are reviewed by the Region Committee.

Block #9: Applications approved by the Region Committee are reviewed by the State of Florida State Technology Office.

Block #10: The Region Committee, or Local Subcommittee as appropriate, will apply the following evaluation points to each application. The assignment of evaluation points will result in the award of a total score for each application. That score is the total of the points awarded in nine categories, with a maximum possible score of 1000 points.

Block #11: Category - maximum score 350 points. Each component of the eligible categories of Public Safety has a predetermined point value as determined by **Table II**. That point value is multiplied by ten (10) to determine the score for that category. An applicant with multiple categories will be scored on the basis of the percentage that each category represents of the total system application. That is, a system which is 50% police and 50% local government (administration) would be awarded the total of 50% of the point value for police plus 50% of the point value for administration.

Block #12: Interagency Communications - maximum score 100 points. The application is scored on the degree of interoperability that is demonstrated, with a range of points from 0 to 100. This category rates the applicant on the proposed ability to communicate with different levels of government and services during times of emergency. This category does not rate the application on the inclusion of the mandated five mutual aid channels for interoperability.

Block #13: Loading - maximum score 150 points. Those applicants who have demonstrated that they are part of cooperative, multi-organization systems will be scored on a range of 0 to 100 points depending upon the extent of the cooperative system. An expansion of an existing 800 MHz system will be scored on a range of 0 to 50 points, depending upon the degree of expansion. A system could be an expansion of an existing 800 MHz and a cooperative system as well, and as a result receive the combined point values for these two subcategories for a maximum value of 150 points.

Table II - Category Evaluation Points

ELIGIBILITY CATEGORIES	POINT VALUE
Local Government:	
Emergency Management.....	35
Transit Systems.....	15
Utility Operations.....	15
Security Patrols.....	15
Administration.....	10
Maintenance.....	10
Other Functions.....	5
Police.....	35
Fire.....	35
Emergency Medical.....	35
Highway Maintenance.....	15
Forestry-Conservation.....	25
Special Emergency:	
State-Licensed EMS Providers (ALS & BLS).....	35
Hospitals (for EMS Communications).....	35
School Buses: Included in an approved Emergency Management Evacuation Plan.....	20
School District Operated.....	10
Private Under Contract.....	5
Disaster Relief Organization.....	15
Beach Patrols.....	10
Non-emergency Patient Transfer (vans, etc.).....	5
Physicians.....	5
Physically Handicapped.....	5
Veterinarians.....	5
Established in Isolated Areas.....	5
Communications Standby Facilities.....	5
Emergency Repair of Public Communications Facilities.....	5
Other Functions.....	5

Block #14: Spectrum Efficient Technology - maximum score 100 points. This category scores the applicant on the degree of spectrum efficient technology that the system demonstrates. A point value range of 0 to 100 points can be awarded for this category. A trunked system would be considered a spectrum efficient technology as well as any technological systems feature which is designed to enhance the efficiency of the system and provide for the efficient use of spectrum.

Block #15: Budgetary Commitment - maximum score 50 points. An applicant that demonstrates a high degree of commitment in funding the proposed system will receive the higher score. The degree of budgetary commitment is scored on a range of 0 to 50 points.

Block #16: Planning Completeness - maximum score 50 points. Each applicant will be scored on the degree of planning completeness with a scoring range of 0 to 50 points. Applicants are required to submit a timetable for the implementation of the proposed communications system or systems.

Block #17: Loading to Coverage Area Efficiency - maximum score 50 points. Each applicant will be scored on the level of spectrum efficiency, based upon the ratio of mobile quantities to area covered in square miles. This ratio measures the level of efficient coverage that a system demonstrates. The higher the ratio the more efficient the use of spectrum. The ratio of mobiles to area covered is scored on a scale of 0 to 50 points.

Block #18: Channel Reuse Potential - maximum score 50 points. Those systems which cover large geographic areas will have a greater potential for channel reuse and will therefore receive a high score in this subcategory. The level of channel reuse potential is scored on a scale of 0 to 50 points.

Block #19: Frequency Givebacks - maximum score 100 points. The applicant is scored in two subcategories; the number of channels given back and the extent of availability of those channels to others. The greater the number of channels given back the higher the score will be, with range of points of 0 to 100. The greater the availability of the givebacks, the higher the score will be in the subcategory for availability to others.

Block #20: Points are totaled for each application and the applications are prioritized according to score by the Region Committee, or Local Subcommittee as appropriate.

Block #21-23: Available channels are assigned in order of application priority, and the Region Plan is updated as necessary. Plan changes requiring FCC action are submitted for review and approval as outlined in the Report and Order, Docket 87-112.

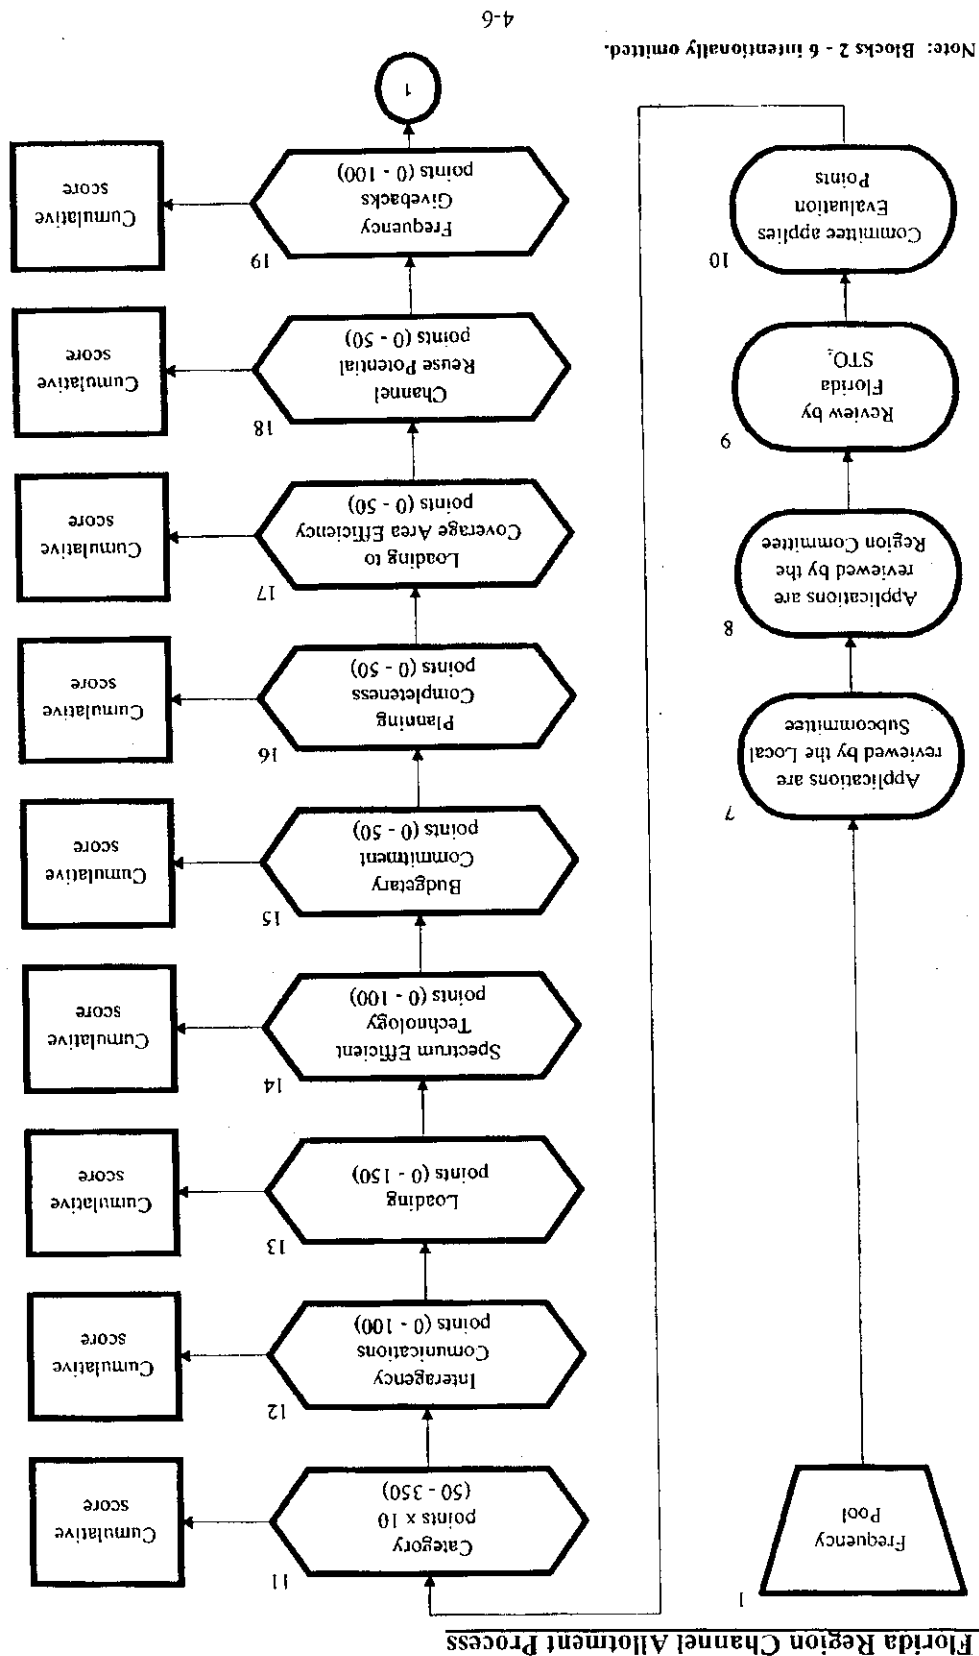

Block #24-25: The completed applications bearing Florida Region approval are then submitted to authorized FCC Frequency Coordinator. Following the Frequency Coordinator's processing, applications are forwarded to the FCC for issue of license.

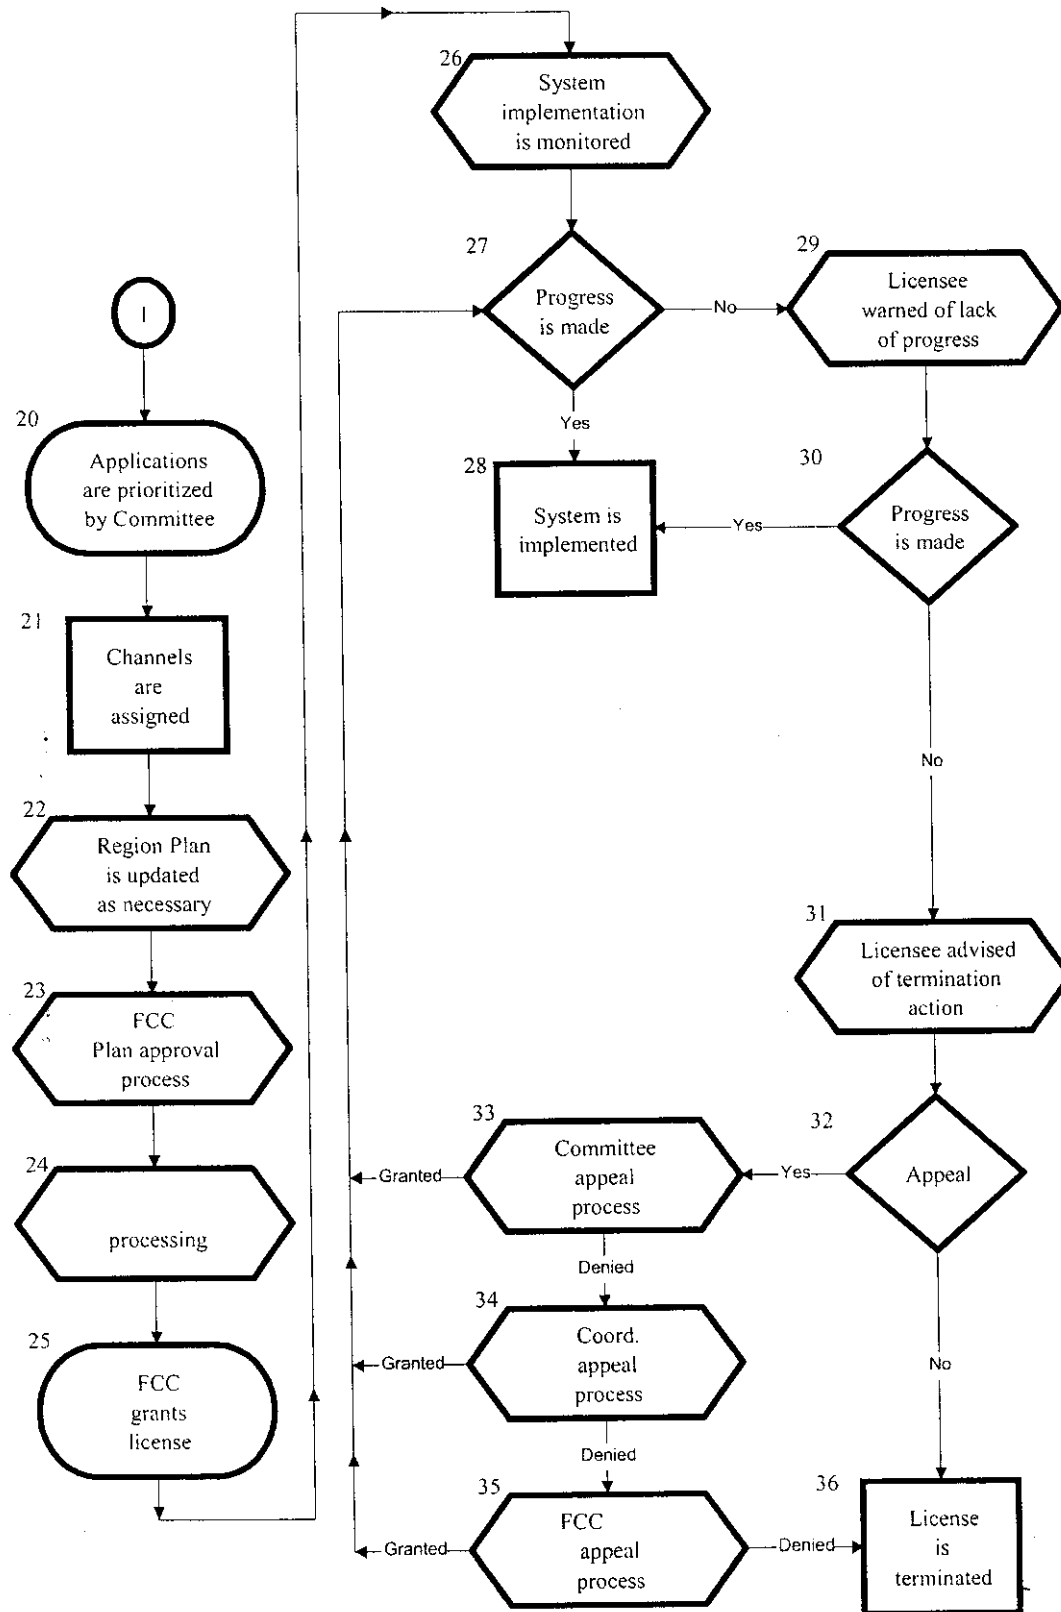

Block #26: Systems implementation of both station construction and channel loading within each subregion will be monitored by its Subregion Committee which determines if satisfactory progress has been made on the implementation. A copy of the records of implementation monitoring will be forwarded to the Region Committee. Monitoring of implementation will take place annually at a minimum.

Block #27-30: If progress is made, the system is ultimately implemented. If progress is not made, the licensee is warned of the consequences of the lack of progress. The Region Committee continues to monitor progress on the implementation of the system.

Block #31-32: If continued monitoring indicates that progress is still not being made, the licensee is notified of pending action to terminate the authorization for channels not implemented on schedule. The notified licensee can appeal this action to the Region Committee, or else relinquish the authorization for the affected channels. If the allotted frequencies are withdrawn, they are added back to the general frequency pool and the process starts a subsequent iteration at Block #1.

Block #33-35: Throughout the frequency allotment process, applicants are given opportunities to appeal decisions which have caused rejection of their application or license termination proceedings. The appeal process has three levels; the Region Committee, the Frequency Coordinator, and the FCC. An applicant who decides to appeal a decision must initiate that appeal immediately upon notification of the action. In the event that an appeal reaches the third level (the FCC), their decision will be final and binding upon all parties.

4.6 Tables of 821-824/866-869 MHz Channel Allotments

Table III shows all channels in the 821-824/866-869 MHz band in a matrix format. The channel spacing in kHz between any two channels can be easily determined from this matrix without having to subtract frequencies.

Table IV shows the table of channel allotments for the Florida Region alphabetically by County. Some counties are further subdivided into the particular county or city agencies requesting channels. Each jurisdiction is assigned a unique jurisdiction number. This table can be provided upon request or downloaded at <http://sto.myflorida.com/safety/r9webpg.htm>

Allotments for which there have been specific requests for channels are indicated as "DEDICATED" in the Allotment Type column. Allotments for which there are no specific requests at this time, but which are available to all eligible entities, are indicated by the term "POOLED" in the Allotment Type column. License applications for DEDICATED or POOLED allotments may be submitted at any time prior to the expiration of the Benchmark Date. Allotments for which FCC license applications have been granted are indicated by the term "LICENSED" in the Allotment Type column.

The coordinates by latitude and longitude, and Protected Service Area Contour (PSAC) radius in miles represent artificial sites and circular contours for allotment purposes only. The resulting combined coverage for a particular area was established to correlate with the actual jurisdiction but not more than three miles beyond. Actual systems may be installed with more or fewer sites, and at different locations than indicated, provided that the PSAC is no more than 3 miles beyond the applicants legal jurisdiction, and the system interference protection standards and other requirements of this Plan are maintained.

Table V shows the table of channel allotments cross-referenced by channel number, and shows transmit and receive frequencies in MHz. This table can be provided upon request or downloaded at <http://sto.myflorida.com/safety/r9webpg.htm>

Channels for portable radios operating on a secondary, non-interference basis to primary channel allotments will appear in Table IV and V only after they have been applied for or licensed. They will be indicated by the term "secondary" and shall be entitled to no protection from primary stations.

4.7 Licensing Benchmarks

Each channel allotment listed in Table IV and V will remain in effect and incontestable for a period of time ending on the Application Benchmark Date shown in IV. Should future allotments of either initial or additional channels be made, they will remain in effect until a Benchmark Date of two years from the FCC approval date of those allotments. Channels which have not been applied for by their Benchmark Date will be re-allotted for new or expanded needs. Such re-allotted channels will similarly remain in effect for two years from their FCC approval date. The term "applied for" means submission to the Region Committee of a complete license application meeting the requirements of Section 6 of this Plan. Channels applied for and approved by the Region Committee shall be subject to re-allotment if the application is not received by an FCC certified coordinator within sixty (60) calendar days after the date of Region Committee approval.

For the purposes of this Section, replacement of FCC designated channel numbers with alternate channel numbers to improve spectrum efficiency or reduce interference shall not be considered an allotment or re-allotment. An increase or reduction in the number of channels allotted to a jurisdiction shall not affect the benchmark date(s) of original or remaining channels. Channels allotted for the State of Florida Joint Task Force State Agency Law Enforcement Communications System are exempt from these benchmark requirements.

Table III - 821-824/866-869 MHz Channel Matrix

Channels in this matrix are spaced 12.5 kHz horizontally and 250 kHz Vertically (except for Mutual Aid Channels which have a 25 kHz adjacent channel spacing). For example, channel 602 and 603 are 12.5 kHz apart, and channel 202 and 622 are 250 kHz apart. Similarly, channels 602 and 642 are $250 + 250 + 12.5 + 12.5 = 525$ kHz apart.
